

Linux Server Maintenance Report

December 26, 2009

example.com

Operating System Updates

Date Checked	Updates Installed
12/05/09	Sudo-1.6.8, tar-1.20
12/12/09	Apache-2.2.9-10, PHP-5.2.6, gcc-4.3.2, libdb-4.6.21, zip-2.32
12/19/09	Samba-3.2.5
12/26/09	Kernel-2.6.18, Postfix-2.5.5

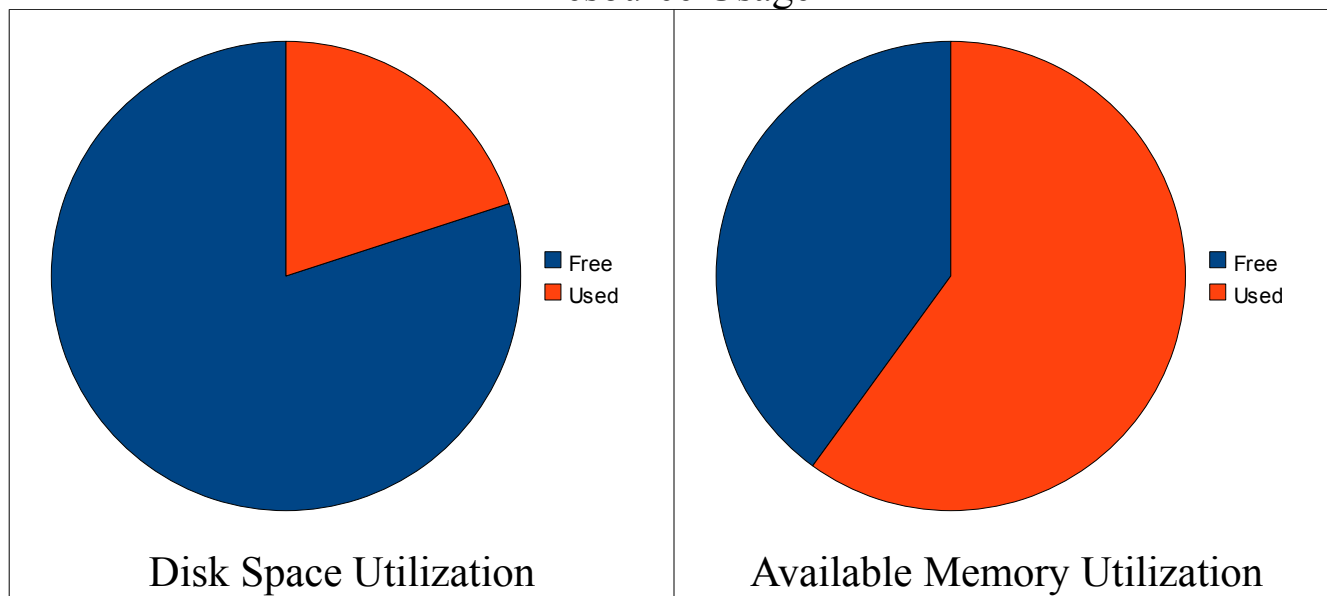

System Log Entries

Date Checked	Issues, or Events Noted
12/05/09	Log of server reboot (12/01/09 at 9:00 EST)
12/12/09	None
12/19/09	None
12/26/09	None

Backup Integrity

Date Tested	Backup file tested	Results
12/05/09	/backup/Fri-mysql.tar	Backup intact (no corruption)
12/12/09	/backup/Thu-www.tar	Backup intact (no corruption)
12/19/09	/backup/Tue-home.tar	Backup intact (no corruption)
12/26/09	/backup/Sat-mysql.tar	Backup intact (no corruption)

Resource Usage

Vulnerability Scan Results

Date	Issues Found/Resolved
12/05/09	TRACE/TRACK enabled in Apache, disabled this feature.
12/12/09	No issues found.
12/19/09	No issues found.
12/26/09	No issues found.

Other Software Updates

Date	Software Updated
12/05/09	Updated Wordpress to version 2.9
12/12/09	Updated Wordpress Platinum SEO Pack to version 1.3.1
12/19/09	No additional software updates available
12/26/09	Updated phpMyAdmin to version 3.2.4

Integrit Scan

Date	Scan Results
12/05/09	/etc/passwd and /etc/shadow modified when user "web" was created.
12/12/09	No modified files.
12/19/09	No modified files.
12/26/09	/etc/apache2/sites-enabled/domains modified with addition of ww2.example.com.

Server Performance Optimization Results

Disabled the following services from running at system startup:

Postfix (no mail is sent from this server)

NTP Client (time synchronization is not crucial)

Additional Notes

For more information on the TRACE/TRACK debugging feature that has been disabled in Apache, please visit the following link:

<http://www.securityspace.com/smysecure/catid.html?id=11213>

Recommend uninstalling Postfix, since this server does not send mail. If you would like for Postfix to be uninstalled on the next scheduled maintenance period, please let me know.
